

## **Unit Testing**

CS 272 Software Development

### **Unit Testing**

- Tests individual methods
- Improves software correctness
- Testing is automatable and manageable
- Performed by developers
- Usually part of continuous testing and/or test-driven development

#### JUnit Framework

- Used for primarily for unit testing
- Built into Eclipse IDE (and most IDEs)
- Uses custom assertion methods (not assert statements)
- Latest versions (v4+) uses annotations
  - o allest, albeforeEach, alafterEach

https://junit.org/junit5/

#### **JUnit Assertion Methods**

assertFalse()

• assertTrue()

assertNotNull()

assertNull()

assertNotSame()

- assertSame()
- assertArrayEquals()
- assertEquals()

https://junit.org/junit5/docs/current/user-guide/#writing-tests-assertions https://junit.org/junit5/docs/current/api/org/junit/jupiter/api/Assertions.html

#### **JUnit Annotations**

- Use **@BeforeEach** for code called before every test
  - Used to setup environment before test
- Use **aTest** to indicate a method is a unit test
  - Should contain one assertion method\*
- Use @AfterEach for code called after every test
  - Used to clean up environment after test

https://junit.org/junit5/docs/current/user-guide/#writing-tests-annotations

#### JUnit a Test Annotations

- Many related test annotations
  - allest, alepeated Test, aleaneterized Test
- Double check importing right annotations!
  - Similar to annotations in JUnit 4
  - Imports should be from org.junit.jupiter.api
- Using System.exit() can break unit tests

https://junit.org/junit5/docs/current/user-guide/#writing-tests https://junit.org/junit5/docs/current/api/org/junit/jupiter/api/Test.html

#### **Advanced JUnit Tests**

- Able to create **parameterized tests** 
  - Create single test that expects parameters
  - Create specific list of parameters to test
- Able to group tests into nested classes
  - Create multiple nested classes of test cases
  - Can also inherit test cases from other classes

https://junit.org/junit5/docs/current/user-guide/#writing-tests-parameterized-tests https://junit.org/junit5/docs/current/user-guide/#writing-tests-nested

#### Example Normal Test

```
aTest
public void testNullFlag() {
  boolean actual = ArgumentMap.isFlag(null);
  Assertions.assertFalse(actual, "null");
```

https://github.com/usf-cs272-fall2021/homework-ArgumentMap-template/blob/9d6de268c89caf7a1b3bbd18c57f7304eaf e87e2/src/test/java/ArgumentMapTest.java#L89-L97

#### **Example Parameterized Test**

```
@ParameterizedTest
alueSource(strings = { "-a", "-hello", ... })
public void testValidFlags(String flag) {
  boolean actual = ArgumentMap.isFlag(flag);
  Assertions.assertTrue(actual, flag);
```

https://github.com/usf-cs272-fall2021/homework-ArgumentMap-template/blob/9d6de268c89caf7a1b3bbd18c57f7304eaf e87e2/src/test/java/ArgumentMapTest.java#L57-L71
